Memorex SingStand, Eye-Fi Explore, Espresso Bike

Memorex SingStand, \$70, www.memorex.com Hook up your iPod or other MP3 player to this karaoke machine—complete with built-in speakers and microphone—and sing along to your favorite tunes. The SingStand even has a feature that suppresses the lead singer's vocals from most tracks, putting your performance front and center.

Eye-Fi Explore, \$129, www.eyefi.com This wireless memory card for cameras lets you snap pictures and upload them straight to your computer via a Wi-Fi network. It can also bypass your computer and place your photos directly on photo-sharing Web sites such as Flickr. The Explore has a 2-gigabyte capacity and can tap into a database of Wi-Fi signals that lets it estimate your physical location and tag your photos accordingly.

Espresso Bike, \$5,145, www.expresso.com The stationary bicycle-cum-video game continues to move from high-end gyms to the home with the first Web-enabled fitness bike. Online access allows you to compare your times and training with those of others. Although such features are still basic—you can't race your friends live yet—free upgrades of biking courses and music promise this exercise equipment will stay fun...and be used.
